Danielle,

I don't think I can answer your questions for a number of reasons. (b) (6)

(b) (6) 2nd I'm not sure what you mean by "toxic sluge". Do you contaminated river sediment? 3rd I'm not sure what you mean by "20,000 acres of the designated cleanup site.". The "site" hasn't been formally defined yet, but the approximate size of the study area is 10 miles and I think that slightly over 2,000 acres of river sediment.

Sorry, I'm not trying to be non-responsive, but I want to make sure I understand your questions. I cc'ed Chip Humphrey at EPA. (b) (6) Chip's phone number is 503.326.2678.

Jim

Hello Jim,

(b) (6) I am fact checking a piece for our August issue and have one question for you. This question is in reference to the Harbor Cleanup. Is it true there is an estimated 5 million cubic yards of toxic sludge within 20,000 acres of the designated clean up site? If not, is there a more accurate number?

If you could get back to me as soon as you are able, it would be much appreciated.

(b) (6)
